

MAWULI WISDOM DZONTOH

Software Engineer · Python · Backend & Automation Systems · Go

wisdomdzontoh@gmail.com | (+233) 055 874 9735 | Accra, Ghana · Open to Remote | [GitHub](#) | [leadsranc.com](#)

Software Engineer with 3+ years building automation systems, backend APIs, and data-driven web platforms. Delivered a production IoT alert system in Go with gRPC; automated multi-stage B2B sales pipelines processing thousands of enriched leads; and built DHIS2-integrated platforms serving 1,000+ facilities. Strong Python foundation with growing depth in Go and systems-level work. Takes projects from design to deployment — solo or in teams.

EXPERIENCE

Growth & Automation Engineer *CBAM ESTIMATOR GmbH*

Jan 2024 – Jun 2025
Germany · Remote

- ▶ Built end-to-end B2B lead generation pipelines in Python — scraping company data with Selenium and BeautifulSoup, enriching leads via OpenAI API, validating emails, and syncing qualified prospects to Pipedrive CRM automatically.
- ▶ Designed outbound email campaign automation workflows, reducing manual sales effort by ~60% and increasing campaign throughput significantly.
- ▶ Automated invoice generation with Python scripts, eliminating a recurring manual finance process.
- ▶ Built and maintained frontend UI components and pages in Next.js/React to match Figma designs; maintained company website sections in WordPress.

Software Engineer *Ghana Health Service*

2021 – 2024
Accra, Ghana

- ▶ Built web applications integrated with the DHIS2 Web API, serving performance data for 1,000+ health facilities — replacing error-prone manual Excel workflows with automated, real-time data pipelines.
- ▶ Automated the national Holistic Assessment process: system fetches live DHIS2 data, applies KPI scoring rules, and generates facility reports on demand — cutting what previously took hours of manual work down to a 2–3 step workflow.
- ▶ Deployed field data collection systems using Kobo Collect and ODK; built analytics dashboards for regional KPI monitoring used by directorate leadership.

SELECTED PROJECTS

Emergency IoT Alert System

Production — delivered for a client

Go · gRPC · PostgreSQL · Next.js · Tauri (Rust) · VPS

- ▶ Designed and built a real-time IoT alert platform: physical devices stream alerts to a Go/gRPC backend server, which propagates them instantly to a Tauri desktop monitoring app (Rust + Next.js frontend).
- ▶ Chose gRPC streaming over REST/WebSockets for sub-second alert delivery under concurrent device load; deployed full stack on a VPS with PostgreSQL — live in production with the client.

Holistic Assessment Automation Platform

Deployed — Ghana Health Service

Django REST · PostgreSQL · DHIS2 Web API · Next.js · Docker

- ▶ Replaced a laborious manual workflow (download → Excel → score → report) with a web application that fetches live DHIS2 data, applies KPI scoring, and generates reports for 1,000+ facilities on demand.
- ▶ Implemented RBAC for regional/district health officers and exportable PDF reports — adopted by Greater Accra Regional Health Directorate.

B2B Lead Intelligence & Automation Pipeline

leadsranc.com

Python · Selenium · BeautifulSoup · OpenAI API · Pipedrive API · n8n

- Built a modular pipeline that scrapes B2B data, enriches it with LLM-based classification (industry, company size, decision-maker), validates emails, and pushes qualified leads to Pipedrive CRM.
- Each stage (scrape → enrich → validate → sync) runs independently and is orchestrated via n8n — making the pipeline reusable across different client target lists.

TECHNICAL SKILLS

Backend	Python · Django · Django REST Framework · FastAPI · Go · gRPC · Celery · Redis
Frontend	Next.js · React · Redux · Tailwind CSS · shadcn/ui
Databases	PostgreSQL · MySQL · MongoDB · SQLite
DevOps	Docker · GitHub Actions (CI/CD) · VPS deployment · Linux · AWS EC2/S3 (working knowledge)
Automation	Python scripting · n8n · Selenium · BeautifulSoup · OpenAI API · LangChain · Pipedrive API
Other	RESTful API design · DHIS2 Web API · Pandas · NumPy · Power BI · Git · JIRA

EDUCATION

BSc. Computer Science (In Progress) <i>Ghana Communication Technology University</i>	2023 – 2026 (Expected)
Software Engineering Program <i>Africa Leadership University</i>	2022 – 2024

Code samples, architecture walkthroughs, and references available upon request.
